

To be successful, you need a competitive edge

You might work faster, work a little harder, be more creative, or maybe just work a little smarter.

And, most importantly, you avoid common pitfalls.

Does this sound familiar?

You get to the jobsite early. You plan your day. And if everything works out right, and you stay a little later, you get the stain down so it can dry overnight.

Tomorrow's plan is to coat this job and begin the next. You are booked solid, and it could be your most profitable month yet.

You show up ready to go, but you discover the stain is not dry. And so begins a domino effect of delays and problems that keeps you juggling schedules the rest of the month.

Coating over stain that hasn't completely dried is one of the major causes of problems on a job. Whether it's peeling, a cloudy finish or blistering, the result is a time consuming and expensive headache.

It doesn't have to be this way!

Choose a smarter way to work

If you're successful, you plan your work, and work your plan. Bona DriFast® Stain helps you work without the difficult scheduling obstacle of an inconsistent stain.

Think about it. 2 hours vs. 8, 16, or even more.

Imagine what that extra time means to your bottom line and what eliminating the uncertainty of dry times does for your peace of mind.

Bona DriFast® Stain is a premium quality stain that is recoatable in 2 hours.

Bona's breakthrough advancement in oil-modified stain technology assures adhesion of the finish, with unprecedented speed. And it can be used with any Bona® waterborne or all other Bona® finishing systems.

Rely on Bona's consistency

Bona DriFast® Stain's oil-modified formula is easy to apply and great to work with.

There's enough open time to rework an area, or blend in sections of cut-up jobsites, without worrying about lapmarks.

Bona DriFast® means consistent performance and dry times you can depend on to keep your jobs on schedule and your mind at ease.

Easy to apply with great workability

- 2-hour dry time*
- No bleed back
- 800 - 1,000 sf/gal

Bona®

Base colors

Bona DriFast® Stain is available in these popular wood tone colors.

Nutmeg

Early American

Red Mahogany

Natural

Golden Oak

Special Walnut

Jacobean

Graphite (formerly Ebony)

Rosewood

Provincial

Antique Brown

Medium Brown

Cherry

Puritan Pine

White**

A premium quality, quick-drying stain, compatible with all Bona finish systems, blendable to achieve any custom look and color you desire.

Contractor:

Samples are shown on Red Oak finished with Bona Traffic® Semi-Gloss. Jobsite results may vary slightly, according to wood type and sanding procedures. Printed colors may vary slightly from actual stain colors. Always prepare test samples on the type of wood to be used.

* Under normal humidity and temperature conditions of 40-60% relative humidity at 65-80°F. Humidity and temperatures outside this range may extend drying times.

** Allow 6 hours minimum dry time for White.

Blending custom colors

There are an unlimited number of custom wood tone colors that can be achieved using Bona DriFast® Stain.

Your contractor can create these custom colors by blending Bona DriFast Stain base colors together.

The blends listed below are just a few examples of the many different color possibilities achievable with Bona DriFast® Stain.

Note to contractor:

Always be sure to document your blending ratios and prepare a test sample on the type of wood to be used, sanded to the final grit. Do not use universal tints to adjust color. Tinting with universal colorants can lead to less vibrant colors and unpredictable application results while risking adhesion of the finish.

Blends

Autumn Gold
1 part Rosewood
1 part Golden Oak

Spice
4 parts Provincial
1 part Jacobean

Dark Walnut
3 parts Jacobean
1 part Provincial

Antique
1 part Provincial
1 part Jacobean
